

# MAINTAINING WALKWAYS

Once installed, walkways typically don't require much maintenance and upkeep. However, depending on which type of material used, it's important to clean and seal your walkway once it's finished to help preserve it.

## POLYMERIC SAND

If you installed pavers for your walkway, weeds and moss will eventually begin to grow between bricks and become an ongoing problem. Adding polymeric sand will eliminate this issue.

## SWEEPING

Simply keeping dirt, grass clippings and other debris – which will eventually begin to wear down the material used to create the path – swept off your walkway will keep it functional and looking attractive.
